```

A report from Animal Medicines Australia (AMA) has found that many Australians took the opportunity to

introduce a pet into their household during the pandemic. Their survey indicated that there was a

significant increase in the percent of households taking in <em>a new dog, fish or bird</em>. Their research

also indicated that pets had a number of <strong>positive influences</strong> on their lives such as:

```
    <ul>
```

```
        <li>Companionship</li>
```

```
        <li>Better mental health</li>
```

```
        <li>Joy and happiness.</li>
```

```
    </ul>
```

</figure>

<br>

With the increase in pet ownership the AMA are encouraging policy makers to consider the needs of

companion animals and their owners when considering rental, strata and body corporate regulations

are well as accepting animals in public places and transport.
